Accessible Theater Set-Up

Remove two chairs for each mobility device space. Offer multiple choices of where to sit. At a minimum set the front, back and middle rows accessible to ensure attendee choice of seats in the room. Increase the amount of accessible seating based on the known or anticipated number of mobility device users expected at your event. Chairs to be un-ganged to allow attendees to move them as needed. Note minimum widths for center and side aisles, and for the distance between accessible and standard rows.

* Measure from the front edge of the chair in the accessible row to the back of the chair in the row in front.
